

Application/Control Number: 09/675,406
Art Unit: 2179

Docket No.: PALM-3506

Amendments To The Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Previously Presented) A method of managing phone calls initiated from a computing device, the method comprising:
 - receiving a dial signal from a call initiation button of a selectable interface of the computing device to initiate a phone call;
 - determining whether digits were received from the selectable interface just before the dial signal was received from the call initiation button; and
 - initiating the phone call in response to the dial signal, wherein the phone call is placed to a last entered phone number if digits were not received just before the dial signal was received from the call initiation button.
2. (Previously Presented) The method of Claim 1, wherein the call signal is received from a hard button of the computing device.
3. (Previously Presented) The method of Claim 1, wherein the call initiation button is a talk button icon.
4. (Previously Presented) The method of Claim 1, further comprising suspending a current application, wherein the current application is unrelated to calling.

Application/Control Number: 09/675,406
Art Unit: 2179

Docket No.: PALM-3506

5. (Original) The method of Claim 1, wherein the phone call is associated with a redialed phone number of a most recent phone call.
6. (Previously Presented) The method of Claim 1, further comprising:
receiving a phone number for the phone call; and
searching a memory of the computing device for a name associated with the phone number.
7. (Original) The method of Claim 1, further comprising:
establishing a connection with another phone device; and
initiating a timer configured to clock a duration of the connection with the other phone device.
8. (Original) The method of Claim 1, further comprising:
receiving a phone number for the phone call;
receiving a save signal to save the phone number; and
initiating an address entry application in response to receiving the save signal.
9. (Original) The method of Claim 7, further comprising:
receiving an ended connection signal; and
initiating a lapse time routine in response to receiving the ended connection signal.
10. (Previously Presented) A portable computing device having a phone capability and a display, the computing device comprising:
a selectable interface associated with the display and configured to substantially emulate a dial pad; and

Application/Control Number: 09/675,406
Art Unit: 2179

Docket No.: PALM-3506

a selection mechanism configured to receive user selections from the selectable interface, wherein the selectable interface includes a call initiation button that, when activated, initiates a phone call to a last entered phone number if digits were not received just before the call initiation button is activated.

11. (Previously Presented) The portable computing device of Claim 10, wherein the computing device is further configured to control phone calls placed and received by the computing device according to the user selections.

12. (Previously Presented) The portable computing device of Claim 10, wherein the display is a touch-sensitive screen, and wherein the selection mechanism includes a tap recognizer configured to identify a tap input from a user.

13. (Previously Presented) The portable computing device of Claim 10, wherein activation of the call initiation suspends a current application.

14. (Previously Presented) The portable computing device of Claim 12, wherein the tap recognizer is further configured to initiate a phone call in response to identifying the tap input.

15. (Previously Presented) The portable computing device of Claim 12, wherein the tap recognizer is further configured to initiate an address entry application in response to identifying the tap input.

16. (Previously Presented) The portable computing device of Claim 12, further comprising a microphone connected to the computing device, the microphone being

Application/Control Number: 09/675,406
Art Unit: 2179

Docket No.: PALM-3506

configured to receive audio input from a user of the portable computing device, wherein the tap recognizer is further configured to deactivate the microphone in response to identifying the tap input.

17. (Currently Amended) A computer-readable medium carrying one or more sequences of one or more instructions for managing a phone call initiated from a computing device, the one or more sequences of one or more instructions including instructions which, when executed by one or more processors, cause the one or more processors to perform the steps of:

displaying a selectable interface in response to the a call signal, ~~wherein the selectable interface;~~

receiving a dial signal from a call initiation button on the selectable interface to initiate a phone call;

determining whether digits were received from the selectable interface just before the dial signal was received from the call initiation button; and

initiating the phone call in response to the dial signal, wherein the phone call is placed to a last entered phone number if digits were not received just before the dial signal was received from the call initiation button.

18. (Previously Presented) The computer-readable medium as recited in Claim 17, wherein the call signal is received from a hard button of the computing device.

19. (Previously Presented) The computer-readable medium as recited in Claim 17, wherein the call initiation button is a talk button icon.

Application/Control Number: 09/675,406
Art Unit: 2179

Docket No.: PALM-3506

20. (Previously Presented) The computer-readable medium as recited in Claim 17, wherein the instructions further cause the processor to carry out the step of suspending a current application, wherein the current application is not a calling application.
21. (Original) The computer-readable medium as recited in Claim 17, wherein the phone call is associated with a redialed phone number of a most recent phone call.
22. (Previously Presented) The computer-readable medium as recited in Claim 17, wherein the instructions further cause the processor to carry out the steps of:
- receiving a phone number for the phone call; and
 - searching a memory of the computing device for a name associated with the phone number.
23. (Original) The computer-readable medium as recited in Claim 17, wherein the instructions further cause the processor to carry out the steps of:
- establishing a connection with another phone device; and
 - initiating a timer configured to clock a duration of the connection with the other phone device.
24. (Original) The computer-readable medium as recited in Claim 17, wherein the instructions further cause the processor to carry out the steps of:
- receiving a phone number for the phone call;
 - receiving a save signal to save the phone number; and
 - initiating an address entry application in response to receiving the save signal.

Application/Control Number: 09/675,406
Art Unit: 2179

Docket No.: PALM-3506

25. (Original) The computer-readable medium as recited in Claim 23, wherein the instructions further cause the processor to carry out the steps of:
- receiving an ended connection signal; and
 - initiating a lapse time routine in response to receiving the ended connection signal.
